

Diacel[®] FL Winterized Liquid Cement Fluid-Loss Additive

Diacel[®] FL Powder Cement Fluid-Loss Additive is a low- to high-temperature range polymer that is dry blended with the cement powder prior to preparation of the cement slurry. Diacel[®] FL Winterized Liquid Cement Fluid-Loss Additive is an aqueous-based liquid polymer that is added into the mix water prior to preparation of the cement slurry.

Both products are non-retarding fluid-loss agents. Their non-retarding property reduces the need for accelerators at low temperatures or with low-density cement slurries. Their fluid-loss control performance is improved when used in conjunction with dispersants and most retarders. With Diacel[®] FL Winterized Liquid Cement Fluid-Loss Additive, a retarder is typically required above 100°F.

Application Areas

- All API classes of cement
- Freshwater, saltwater or seawater slurries

Typical Range of Use

Temperature	70°F - 450°F (21°C - 232°C) BHCT
Concentration	0.25% - 1.5% BWOC (powder) 0.22 - 2.5 US gal / 94-lb sack (liquid)
Density	12 - 20 lb/US gal (1.44 - 2.4 g/cm ³)

Physical Properties

Diacel[®] FL Powder Cement Fluid-Loss Additive

- White powder
- Specific gravity = 1.66 g/cm³
- Complete water solubility

Diacel[®] FL Winterized Liquid Cement Fluid-Loss Additive

- Freeze-conditioned aqueous liquid polymer
- Specific gravity = 1.11 g/cm³
- Complete water solubility

Before using this product, the user is advised and cautioned to make its own determination and assessment of the safety and suitability of the product for the specific use in question and is further advised against relying on the information contained herein as it may relate to any specific use or application. It is the ultimate responsibility of the user to ensure that the product is suited and the information is applicable to the user's specific application.
